Master Platform Inventory

Date: 2026-07-17

Repo: waypoint-studio-site

Stack: Static multi-page HTML / CSS / vanilla JS (no package manager, no build step, no framework)

This inventory describes the **actual** repository, not aspirational architecture.

What exists

Studio shell

Route	Status
/	Homepage (product catalog)
/about/	Archive-style about (older <code>styles.css</code>)
/privacy/	Privacy philosophy page (added this audit)
/contact/	Contact / email (added)
/support/	Redirects to Contact (added)
/404.html	Not-found page (added)
/robots.txt, /sitemap.xml	Crawler basics (added)

Interactive / product surfaces

Route	Status	Notes
/waypoint-scenes/	Active prototype	Two-scene interactive photography
/foragecast/	Open beta	Weather reads, heatmap, forms, Learn
/foragecast/education/	Live	Species catalog
/sheds/	Open prototype	Leaflet Field View + demo zones
/volunteer/	Open prototype	Discovery Engine v0.1
/volunteer/opportunity/	Live	Detail by <code>?id=</code>
/volunteer/organization/	Live	Org profile by <code>?id=</code>
/volunteer/saved/	Live	Private localStorage planning
/fielddry/	Planned landing	No app yet
/education/	Early foundation	Landing + topic placeholders

Route	Status	Notes
/knowledge-graph/	Schema / docs / examples	Not a public end-user app UI

Archive IA (older nav)

/projects/, /gallery/, /workshop/, education topics, podcast/articles placeholders.

Shared assets

Path	Role
styles/site.css	Primary product design system
styles/styles.css	Older archive system
styles/foragecast.css, foragecast-education.css, sheds.css, volunteer.css	Product chrome
shared/ally-dialog.js	Dialog focus trap helper (added)
assets/species/	ForageCast SVG placeholders

What does not exist in this repo

No public routes / implementations for:

- Dashboard / Today Outside
- Photo Coach / Photographer Profile
- SignalTerrain Radio & Spectrum
- SignalTerrain Cyber Awareness
- Steepleaf
- Savant Sommelier
- Landscape Interpretation
- Hidden Landscapes app
- Shared profile / locations / collections / settings
- Service workers, web manifests, IndexedDB layers
- package.json, CI workflows, automated browser e2e (beyond tests/smoke.mjs)
- Custom domain CNAME (deleted historically)

Homepage now lists these under **Long-term direction** with an explicit “not available” disclaimer.

Data providers & third parties

Provider	Used by
Open-Meteo (forecast, geocoding, elevation)	ForageCast, Volunteer
Leaflet 1.9.4 + CARTO tiles	Sheds, ForageCast, Volunteer
Google Fonts	Most product pages
Formspree	ForageCast beta/waitlist/feedback
<code>mailto:</code>	Waitlists / contact

No analytics trackers found in-repo.

Client storage

Key / system	App
<code>waypoint-volunteer-planning-v2</code> (+ v1 migrate)	Volunteer
ForageCast beta dismiss flag	ForageCast

Geolocation: Sheds, ForageCast, Volunteer (user-initiated).

Maps

Leaflet on Sheds, ForageCast heatmap, Volunteer discovery.

Forms

ForageCast beta, waitlist, feedback → Formspree endpoint in `foragecast/forms.config.js`.

Duplication / debt

- Product nav HTML copied per page (no shared partials — static hosting).
 - Two CSS systems (`site.css` vs `styles.css`).
 - Large hero JPEGs (~13MB / ~5.7MB) duplicated at root and under `waypoint-scenes/`.
 - Archive gallery/workshop still use “Placeholder” tiles.
-

Deploy posture

GitHub Pages–style static hosting expected (`bfree7885/waypoint-studio-site`).

Live *.github.io probe from this environment returned **403** (cannot verify public deploy parity here).

Master Audit — July 2026

Scope reality check

The audit brief names many applications (Dashboard, SignalTerrain, Photo Coach, Steepleaf, etc.).

Those applications are not present in this repository. They are documented as long-term direction only.

Audit and repair focused on the **actual** public surface: homepage, About/Privacy/Contact, Waypoint Scenes, ForageCast, Sheds, Volunteer, Education/Fieldry landings, knowledge-graph docs, archive pages.

Condition before

- Strong prototypes (Scenes, ForageCast, Sheds, Volunteer) on a calm design system.
- No Privacy/Contact/Support routes; no robots/sitemap/404.
- Homepage mixed “upcoming” language with live prototypes; did not disclose missing future apps.
- Volunteer Discovery Engine v0.1 present locally (uncommitted) with demo `example.org` links.
- Missing ambient mp3s under archive WS_0001 experience.
- About dialogs lacked focus trapping.
- No automated smoke tests; no package/lint/typecheck toolchain.
- Deployed site not verifiable from this environment (HTTP 403).

Condition after

- Trust routes: Privacy, Contact, Support → Contact, 404, robots, sitemap.
- Homepage splits **Available now / Early foundations / Long-term direction**.
- Shared `a11y-dialog.js` with focus trap; wired into Sheds + Volunteer.
- Noscript banners on Sheds, Volunteer, ForageCast.
- Broken WS_0001 mp3 references removed (silent ambient channels).
- Stronger Volunteer demo labeling.
- `tests/smoke.mjs` covers routes, honesty markers, Volunteer engine, link warnings.
- Full review doc set under `docs/MASTER-*` and domain/privacy/a11y/perf reviews.

Largest improvements

1. Public honesty about what is / is not available.
2. Privacy expectations match behavior.
3. Accessibility of About dialogs.
4. Crawl/error basics for static hosting.

5. Regression smoke coverage for Volunteer + critical routes.

Remaining risks

- Unoptimized multi-MB hero images (performance / mobile data).
- Formspree + Google Fonts third-party network dependency.
- Volunteer catalog is demo-only — risk of user confusion if labeling overlooked.
- No real CI, HTML validators, or cross-browser automation in-repo.
- Cannot confirm GitHub Pages deployment or cache state from this environment.

Master Repair Log — July 2026

ID	Priority	Problem	Root cause	Repair	Verification
R1	P1	No Privacy page despite privacy-first claims	Missing route	Added <code>privacy/index.html</code>	Smoke + manual read
R2	P1	No Contact/Support	Missing routes	<code>contact/</code> , <code>support/</code> → <code>contact</code>	Smoke
R3	P1	Homepage implied broader catalog than exists	Content drift	Available / foundations / direction sections	Smoke honesty asserts
R4	P1	About dialogs: no focus trap	Custom handlers only	<code>shared/ally-dialog.js</code> ; Sheds + Volunteer	Code review + smoke load
R5	P1	Dialog helper <code>close</code> shadowed by DOM node	Naming bug in first draft	Renamed to <code>closeDialog</code>	Code review
R6	P1	WS_0001 referenced missing mp3 files	Assets never committed	Removed <code><source></code> tags; comment left	Link scan + smoke
R7	P2	JS apps had no noscript explanation	Omission	Noscript banners	Manual HTML check
R8	P2	No robots/sitemap/404	Omission	Added root files	Smoke exists
R9	P2	Volunteer demo links could look real	Demo data + weak chrome	Stronger map demo tag	Visual/copy check
R10	P2	No automated regression net	No tooling	<code>tests/smoke.js</code>	<code>node tests/smoke.js</code>
R11	P2	About page isolated from privacy	Archive IA	Links to <code>products/privacy/contact</code>	File check
R12	P3	Skip link missing on homepage	Omission	<code>.skip-link</code> in <code>site.css</code> + homepage	CSS/HTML

Intentionally not repaired (documented)

- Compressing 13MB hero JPEGs (needs image pipeline / owner assets).
- Building missing apps (Dashboard, SignalTerrain, etc.).
- Replacing Formspree or self-hosting fonts.
- Full WCAG certification claim.

Master QA — July 2026

Tooling baseline

Command	Result	Notes
<code>ls package.json</code>	Missing	Predates audit — no npm install/build/lint/typecheck
<code>npm test</code> / Playwright / Jest	N/A	No harness
HTML/CSS validators (W3C)	Not run	Network/tooling not wired in CI
<code>npm audit</code>	N/A	No lockfile; CDN deps only
Service worker tests	N/A	No SW
Manifest validation	N/A	No manifest

Checks run this work block

Command	Result
Python internal link scan (pre-repair)	9 missing → all WS_0001 .mp3
Python internal link scan (post-repair)	Re-run via smoke WARN if any
<code>node --check</code> on Volunteer JS modules	Pass (prior session + engine load)
<code>node tests/smoke.js</code>	See latest run output in owner report
<code>curl</code> GitHub Pages	403 Forbidden — deploy parity unknown
Chromium/Firefox interactive	Available in environment; full matrix not automated

Manual interaction checklist (high confidence)

Action	Result
Homepage → each Available product	Links resolve
Privacy / Contact / Support	Resolve
Volunteer filters + Today I Can (engine)	Unit-level via smoke
Sheds/Volunteer About dialog script hooks	Present
ForageCast disclaimers	Present in HTML/JS
Sheds “not a find guarantee”	Present

Gaps

- No headless screenshot matrix across breakpoints.
- No offline simulation beyond code review of banners.
- No Formspree live submit test (would create real inbox noise).

Accessibility Review — July 2026

Method

Code review of product HTML/CSS/JS against WCAG-oriented heuristics.

Not a full WCAG conformance audit. No claim of compliance.

Strengths already present

- Skip links on Sheds and Volunteer field apps.
- `aria-current`, `aria-pressed`, `aria-live` in places.
- Focus-visible styles on shared buttons/links.
- Reduced-motion rules in Scenes and Volunteer CSS.
- Touch-oriented control sizes in Sheds/Volunteer.

Findings & repairs

Priority	Finding	Status
P1	About dialogs lacked focus trap	Fixed via <code>shared/ally-dialog.js</code>
P1	Homepage lacked skip link	Fixed
P2	JS-only apps silent without JS	Fixed noscript banners
P2	Archive WS_0001 <code>cursor:none</code> / no language attr	Remaining (archive experience)
P2	Map-only content needs text alternatives	Partial — lists accompany maps
P3	Duplicate H1 patterns across marketing pages	Acceptable for MPA

Remaining

- Full keyboard pass on ForageCast multi-form page.
- Screen-reader pass with NVDA/VoiceOver not performed in this block.
- Contrast sampling not instrumented; dark theme relies on design tokens.

Privacy & Security Review — July 2026

Defensive review only. No offensive testing.

Privacy promises vs behavior

Promise	Behavior	Verdict
Private saves (Volunteer)	<code>localStorage</code> only	Matches — documented on Privacy page
No social graph	No profiles/followers	Matches
Location optional	Geolocation on user gesture; demo fallback	Matches
No invasive analytics	None found in repo	Matches

Security findings

Priority	Finding	Action	
P2	Formspree endpoint public in repo	Expected for Formspree; documented; not a secret key	
P2	<code>innerHTML</code> used for cards/insights	Content from static catalog + escaped helpers in Volunteer cards/detail	Keep discipline; no user HTML
P2	External scripts (Leaflet, fonts)	Leaflet uses SRI; fonts without SRI	Accept / document
P3	<code>target=_blank</code>	Volunteer uses <code>rel="noopener noreferrer"</code>	OK
—	Secrets / API keys	None found beyond public Formspree form id	OK
—	Open redirects	Not observed	OK

Data leaving the browser

- Open-Meteo queries include lat/lon when user/demo location set.
- Map tile requests reveal approximate viewport.
- Formspree receives emails users submit.

Cannot fix in-repo alone

- GitHub Pages security headers.
- Confirming production caching / HTTPS config.
- User device compromise of `localStorage`.

Performance Review — July 2026

Measured / observed

Asset	Size	Impact
boardwalk.jpg (root + scenes)	~13 MB each	Severe mobile cost; largest P2 issue
fogforest.jpg	~5.7 MB	High
ws0001.jpg	~2.8 MB	High for archive scene
counties.data.json	~50 KB	Fine
Leaflet CDN	Shared	Network dependency

No bundler; many small JS files on Volunteer (acceptable for clarity).

Improvements this block

- Documented image weight as known limitation.
- Removed missing audio fetches (failed requests).
- Noscript avoids implying broken interactivity.

Not done (needs owner assets / tooling)

- Re-encode hero images (WebP/AVIF, responsive `srcset`).
- Deduplicate root vs `waypoint-scenes/` copies.
- Font self-hosting.
- Map tile caching strategy.

Resilience

- Weather failures degrade Volunteer Today insights.
- Geolocation denial falls back to demo center.
- Sheds offline banner exists.
- No service worker (no stale-SW risk; also no offline shell).

Domain Quality Review — July 2026

Domain reviewers are **not** licensed professionals. Judgments use public product honesty + existing in-repo disclaimers.

Present applications

ForageCast

- Disclaimers present: not edibility/legal/safety guarantee; land permission language; lookalikes in Learn.
- Residual risk: users may still over-trust scores — keep “guidance only” prominent (already on hero).
- Leafturn “what should I do on my land today?” property tasks: **not** a full product module yet.

Sheds

- Demo zones labeled; education mode hides hotspots; ethics copy present.
- Does not claim guaranteed finds.
- Regulation specifics are thin — appropriate for prototype; avoid expanding into legal advice.

Waypoint Volunteer

- Mission fit: “What good can I do today?”
- Demo catalog + example.org — must remain labeled (strengthened).
- No gamification. Citizen science integrated as opportunity type.
- Not a VMS / social network.

Waypoint Scenes

- Photography experience; credits present on main scenes page.
- Photo Coach / EXIF critique: **absent**.

Fieldry / Education

- Landings / thin topics — correctly “planned” or “early foundation.”
- Do not imply validated biodiversity records.

Absent applications (direction only)

Dashboard, Photo Coach, SignalTerrain (radio/cyber), Steepleaf, Savant Sommelier, Landscape Interpretation, Hidden Landscapes — **no domain certification possible**; do not advertise as live.

Knowledge graph

- Schema-first foundation; suitable as shared future substrate; not user-facing discovery yet.

Known Limitations

Living list for operators and future agents.

1. **Static hosting only** — no accounts, sync, or server-side validation.
2. **Hero imagery** — multi-MB JPEGs hurt mobile performance.
3. **Volunteer data** — illustrative demo catalog; not verified nonprofit listings.
4. **Sheds zones** — synthetic demo polygons, not predictive habitat models.
5. **ForageCast** — environmental guidance only; never treat as ID or edibility authority.
6. **Missing apps** — Dashboard, SignalTerrain, Photo Coach, Steepleaf, Sommelier, Landscape Interpretation are direction-only.
7. **Third parties** — Google Fonts, Leaflet/CARTO, Open-Meteo, Formspree.
8. **No service worker** — limited offline; also avoids SW cache staleness.
9. **Archive pages** — gallery/workshop/podcast placeholders remain.
10. **WS_0001 ambient mp3s** — not bundled; channels silent.
11. **Deploy verification** — GitHub Pages may 403 from some environments; confirm in browser after publish.
12. **Tests** — `tests/smoke.js` only; no visual/e2e matrix.
13. **Dual CSS systems** — `site.css` vs archive `styles.css`.
14. **Nav duplication** — hand-maintained across HTML files.
